TINTING & LAMINATION AFTER CARE

Congratulations on your Tinting/ Lamination! You look Fabulous!!

We want your lashes/ brows to stay as beautiful as they are today!

Follow these tips:

- Avoid getting the area wet for at least 24 – 48 hours. The tint needs time to settle into the hair and washing them too soon may cause fading.
- Avoid exposure to hot temperatures, steam and sun
- Avoid oil-based products on the area tinted. Take a look at your skincare and makeup products.
- Avoid difficult to remove mascaras.
- Use an eyelash extension cleaner. These are oil free and gentle
- Avoid touching, pulling or leaning on the tinted area. Your skin has natural oils and the more you touch the treated area the quicker the area will fade.
- Try not to sleep on your face as any rubbing will create fading

Tinting should last 4-6 weeks. Follow these instructions will help maintain the intended shade. Tinting fades as your hair naturally sheds and new growth appears. We recommend retreating every 4-6 weeks.

Contact the clinic at 208-799-3333 if you have any adverse reactions such as swelling, itching or redness.
